

## Encounter: Antenatal Specialty

Data Element Name	BORN ID	Data Element Definition	Pick List Value	Pick List Definition
Alcohol Exposure in Pregnancy	D0012	Self-reported alcohol consumption during pregnancy. A standardized serving of alcohol beverage is approx a 12oz serving of regular beer (5%), a 5oz glass of wine (12%) or a 1.5oz glass of 40% spirit (SOGC, 2010). If the amount of drinking varied over the course of the pregnancy, estimate the total number of drinks and average it out over the entire pregnancy. Select the one that represents the highest exposure or impact. 'Episodic excessive drinking (binging)' is considered the greatest impact.	None	
			Less than one drink per month	
			One drink per month	
			2-3 drinks per month	
			One drink per week	
			More than one drink per week	
			Episodic excessive drinking (binging)	Binge drinking corresponds to an average-size female consuming 4 or more drinks in about 2 hours (SOGC, 2010). If mother reported drinking 'More than one drink per week' and binge drinking, select 'Episodic excessive drinking (binging)'.
			Exposure prior to pregnancy confirmed, amount unknown	Select if mother drank in first trimester and/or until she learned of her pregnancy.
Unknown				
Chorionicity	CHORION		1 chorion	
			2 chorion	
			3 chorion	
			4 chorion	
			Unknown	
Complications of Pregnancy	M0531	Pregnancy related complications experienced during this pregnancy. Select all that apply.	None

## Encounter: Antenatal Specialty

Data Element Name	BORN ID	Data Element Definition	Pick List Value	Pick List Definition
Consanguinity	FAN0019	Refers to maternal and paternal sharing of at least one ancestor in common. (Cunningham, 2005)		
Cytogenetic Result Failure Reason	FAN1007FAIL	Indicates the reason(s) that a cytogenetic investigation failed (for example, culture failure, etc)		
Cytogenetic Result General	FAN1007	Indicates whether the individual's cytogenic results were normal or abnormal	Abnormal	
			Abnormal, specify:	
			Failed	
			Failed, specify reason	
			Normal	
			Normal, polymorphism detected	
			Variant of uncertain significance	
			Unknown	
Cytogenetic Testing Disease Identifier	FAN1006ODI	The chromosome region that was interrogated for deletion or duplication by FISH	22q11.2 deletion / DiGeorge syndrome 1, velocardiofacial 1	
			1p36 deletion syndrome	
			8q23.2-q24.1 deletion / Langer-Giedion syndrome	
			20p12 deletion / Alagille syndrome	
			Xp22.31 deletion / X-linked ichthyosis	
			10p13-p14 deletion / velocardiofacial 2	
			1q21 deletion / thrombocytopenia absent radius	
			11p15.5 deletion / Beckwith-Wiedemann syndrome	
			8q12.2 deletion or duplication / CHARGE syndrome	
			Duplication 7q11.23	
			Xq28 duplication / MECP2 duplication MR syndrome	
			22q11.2 duplication

Pregnancy Outcome	F0053	Indicates the actual outcome of this pregnancy, including live births, stillbirths, terminations and losses. BORN encourages all hospitals to complete a Birth Mother encounter for all pregnancy losses that occur in your unit.	Stillbirth at >=20wks or >=500gms \ Termination	Stillbirth is defined as the complete expulsion or extraction from its mother of a product of conception either after the 20th week of pregnancy or after the product of conception has attained the weight of 500 grams or more, and where after such expulsion or extraction there is no breathing, beating of the heart, pulsation of the umbilical cord or movement of voluntary muscle (Vital Statistics Act, Ontario).
			Pregnancy Loss <20 weeks and <500 gms \ Spontaneous Miscarriage	Select Pregnancy Loss <20 weeks only if weight is <500 gms.
			Pregnancy Loss <20 weeks and <500 gms \ Termination	Select Pregnancy Loss <20 weeks only if weight is <500 gms.
			Pregnancy Continued

Type of Conception	M0201	Method of conception for this pregnancy; indicates if reproductive assistance was required to achieve current pregnancy	Spontaneous	Assisted reproductive technology was not used
			Intrauterine insemination alone	Sperm is instilled directly into the uterine cavity through a syringe and catheter. Can be partner or donor sperm. Referred to as IUI.
			Intrauterine insemination with ovulation induction but no IVF	Same as intrauterine insemination (IUI) but woman received drugs to stimulate ovulation prior to the IUI. The woman may produce one or many eggs as the result of the stimulation protocol. Multiple births are a risk with this procedure. Sometimes, an ultrasound is performed prior to the IUI to determine how many follicles have matured and the procedure may not be carried out if many eggs are produced.
			Ovulation Induction without IVF ( ie clomid or FSH)	Drugs are given to stimulate ovulation. Normal intercourse, IUI (intrauterine insemination) or vaginal insemination follows but no other manipulation of the egg or sperm.
			IVF	In Vitro fertilization - Eggs are retrieved from the ovaries through a transvaginal (usually) procedure, guided by ultrasound that shows where the mature follicles are. Eggs are then placed in a sperm solution and fertilization occurs. Fertilized embryos are grown in the lab for a few days (3 or 5) and then a certain number are transferred back into the uterus. The remainder of viable embryos may be frozen for future use.
			IVF ICSI	In Vitro Fertilization with Intra Cellular Sperm Injection - A single sperm is chosen from the sperm sample and injected directly into the egg for fertilization. The embryo(s) fertilized are then transferred into the uterus as in a regular IVF procedure and/or frozen for future use.
			Surrogate	A Gestational Carrier. Another women carries the embryo/fetus for the couple who are unable to carry a pregnancy for whatever reason. The baby is surrendered at birth to the fertility patient.
			Vaginal insemination	
			Unknown
